Barracuda Networks manufactures the Barracuda Spam Firewall family, the most trusted spam-blocking networking devices for small and large companies.

The Barracuda Spam Firewall handles a massive amount of email, over 10 million messages a day, without bogging down your email servers. It also filters out viruses at the same time. The innovative hardware and software design incorporates reliability from the ground up. To provide you with maximum protection against the latest types of spam and virus attacks, Barracuda Networks also maintains a powerful operations center, Barracuda Central. From there, our engineers continuously monitor the Internet for trends in spam and virus attacks. Updates to counter these attacks are then automatically retrieved by your Barracuda Spam Firewall, thus relieving you of this task.
